

Milking Systems Destroying the Udders of Cows

Swollen and reddened teat considered “normal” by Cornell QMPS Director

Normal teat after milking

Quality Milk NEWS

What's the problem?

What's the problem? It's a swollen, reddened teat. This is a sign of mastitis, a common udder infection. QMPS (Quality Milk Production Services) is a Cornell University program that provides training and resources to help dairy producers improve milk quality and udder health. QMPS offers on-farm consulting, workshops, and seminars. For more information, visit www.qmps.org or call 607-255-8022.

Mastitis is everyone's fight.

You fight mastitis every day with proper milking procedures, a clean environment and diligence to herd health. At the National Mastitis Council (NMC), we're taking your fight industry wide. We're arming you with powerful weapons against mastitis: education, research and technology. And with practical information for your operation, like the NMC guidelines for a recommended annual examination of your entire milking system.

Together, we can all help control the two billion dollar annual losses mastitis causes the industry. Discover everything NMC is doing to reduce mastitis and enhance milk quality. Visit our website today.
